

IMPI GROUP OF COMPANIES

Partnering with Global Biopharma

Unprecedented scope for partnering with Global Pharma Industry— this is a full-city proposal combining biotech R&D, biopharma manufacturing, AI-health wearable manufacturing, healthcare, green energy, and space tech at a \$79.1B+ capital requirement, rarely attempted anywhere in the world. Biotechnopolis Digital & AI Backbone on which Biopharma 4.0 rests, is a unique opportunity to modernize drug manufacturing for any drug company.

**HEALTH
MARKET**

**8,000 km by 8,000 km
E $\leftrightarrow$ W & N $\leftrightarrow$ S**

- As of 2024, there were 19 major biotech hubs in the world, zero in Africa
- Africa has only 375 Pharma companies for 1.6 billion people vs 10,000 in India for 1.4 billion people
- Africa purchases >95% of medications from outside the continent – the largest transfer of wealth from the poor to the rich
- This ends in our generation!

African Continental Free Trade Area (AfCFTA) signed into law in 2018

A single market projected to grow to \$6.7 trillion in spending by 2030

Medicines produced in any African country are local & will be given priority over exports

African Governments obligated to buy from local African manufacturers

Africa's Healthcare Market Problems

- ✓ Fragmented into 54 jurisdictions based on arbitrary colonial boundaries
- ✓ Model of healthcare delivery was established by colonial masters, is archaic & has failed
- ✓ Political sibling rivalry: African countries view others as competition
- ✓ No ownership of healthcare & biopharma manufacturing systems
- ✓ **Africans** told to “stick to generics!”

The Biotechnopolis is Africa's Healthcare Market Integrator

- ✓ AfCFTA has dissolved boundaries & tariffs across Africa and Caribbeans
- ✓ Technology dissolved the arbitrary colonial borders in delivery of products
- ✓ Model of healthcare delivery and biopharma based on **innovation**
- ✓ All Africa is local
- ✓ Each biotechnopolis biopharma manufacturing company has a sibling in the same in the ecosystem of hubs across Africa, a one family approach

IMPI Group Development Partners

**Latham
& Watkins**

Legal and financial advisor & cross-border corporate structuring

TruSense

Client engineer for physical infrastructure & waste-to-energy

**SPONSOR
(SCOP)**

Luxembourg-based climate finance company mobilizing capital for climate-mitigating infrastructure

**AFRICAN
GOVERNMENTS**

Global Investment Framework Agreements (GIFAs) & International finance rules

General

Biopharma resilience requires manufacturing facilities in multiple locations across Africa's 54 jurisdictions to mitigate risks

For each company in the biotechnopolis there is a twin in one of the 53 Africa jurisdictions

All Africans are siblings and not competition!

Biotechnopolis Global Scale Comparison

Rules-governed and planned

Global Investment Framework Agreement (GIFA)

Complete biopharma ecosystem integrated into continental & global biomedical supply chains

Capital & Currency Rules

Multi-currency regime under the Victoria Falls International Finance Center (VFIFC) rules & English Law

Drugs Under Patent Priority

Deliberate move away from generics

BIOTECHNOPOLIS

10,006 ha

Vertically integrated supply chain | 1,000 manufacturing companies

MENLO PARK

4,047 ha

>\$100B annual revenue

2.5x smaller

KENDALL SQUARE, CAMBRIDGE MA

81 ha

120 biotech companies | ~\$200B market value

A full city — not a hub — with 125x more land than the world's premier biotech cluster

GIFA: INVESTOR PROTECTION & INCENTIVES FRAMEWORK

Financial & Tax Incentives

10-Year Tax Exemption

0% corporate tax for the first decade, then capped at 15% in perpetuity.
VAT-free operations throughout.

Duty-Free Imports

Capital equipment, raw materials, and intermediate products not produced locally enter duty-free.

Expatriate & Investor Benefits

Flat 15% tax on specialized expatriate staff.
Full exemption from non-resident tax on royalties and dividends.

Land Grants

First 20 charter members receive 10 acres each.
Next 80 pioneers get 2 acres each.

Currency & Legal Framework

Multi-currency regime under VFIFC rules.
Profit repatriation in currency of choice.
Governed under English law.

R&D Cost and Innovation Advantages

~40% of US Labor Costs

Even after boosting wages and benefits 4x above Zimbabwe's average

94% Forecasting Accuracy

NASOS "System of Systems" AI vs. 3–11% for traditional animal models — reduce costs 90% and accelerate time-to-market 2–3x

99.94% Prediction Accuracy for Phase 3 studies at discovery

Phase Advance AI Inc (<https://phaseadvance.ai/>)

\$100M / 3 Years

FASTER AND CHEAPER NEW BIOLOGICS & BIOSIMILAR DEVELOPMENT

vs. \$300M / 5–7 years typical, or \$3B / 10–15 years for novel biologics

90%

COST REDUCTION

via AI-driven drug development

2–3x

FASTER

time-to-market acceleration

Value Chain & Economics of Manufacturing

Local manufacturing of APIs, drug-delivery vehicles, reagents, filling, pharmaceutical containers, and excipients to further lower cost of goods

Training & Computational Power

Biotech, AI, and genetics training facilities under construction.

Compute buildout positioned as best computational power outside North America, anchored by a hub of 10 companies.

Full-Stack Manufacturing (Renewables-First)

Health AI wearables, API, drug accelerators, drug delivery, CROs, packaging & filling, biologics, small molecules hubs.

Target: >95% local content, carbon-neutral, 100% renewable energy.

Enabling Ecosystem

Regulatory & IP hub, specialized quality control/GLP/GMP best-practices hub, and marketing HQ hub with global offices.

Co-located R&D, clinical, manufacturing, packaging, and commercialization.

Economics & Finance

COGs target ~25% of US/EU.

Multi-currency regime under VFIFC rules with English law governance.

Full profit repatriation in currency of choice.

Biotechnopolis Digital Backbone & Biopharma 4.0

Funded by the \$15.7B infrastructure fund | Powered by Inventico Creative (12 yrs in India & Singapore)

Automation & Robotics

Mandatory for all consortium companies. Robotic systems streamline production lines and quality control, reducing human error and increasing precision.

Data Analytics & Digital Twins

Embedded from construction through production. All manufacturing plants have digital twins enabling real-time issue anticipation and proactive quality management.

AI & Machine Vision

AI optimizes production, reduces downtime via predictive maintenance, and detects defects on the manufacturing line for higher-quality output.

Blockchain & Smart Contracts

5 BaaS companies underpin the digital backbone. Every product gets a block from manufacturing through supply chain to patient delivery, ensuring traceability.

Internet of Things (IoT) & System of Systems (SoS) Manufacturing

City-wide IoT backbone connects sensors monitoring critical variables, creating a responsive production environment across all biopharma operations. SoS approach to drug development and manufacturing.

Talent Evolution

Cross-functional training in pharma, IT, and mathematics. Training modules already deployed to prepare workforce for Biopharma Manufacturing 4.0.

6 Biopharma 4.0 Challenges Solved

Cost: Infrastructure covers Biopharma 4.0 costs

Talent: Training modules already deployed

Regulatory: Built-in compliance systems

Data Security: Privacy by design

IP Protection: GIFA-integrated backbone

Membership & Consortium Structure

Charter Members (First 20)

Must be registered 5+ years, generating revenue, willing to register via the VFIFC and submit financials for due diligence. Receive 10 acres each. Charter membership is **almost completed** and will be closed by Q3 2026.

Pioneers (Next 80)

Same criteria plus independent third-party valuation and 5 years of audited financials. Receive 5 acres each.

Governance

Accepted companies form their own organizational entity, choosing at least one IMPI Group board member

Build Requirements

Building plans within 6 months, foundations within 12 months of acceptance

Eligibility & Vetting of Biopharma Companies

Eligibility Criteria

Applies to all candidate companies seeking to join Biotechnopolis.
Criteria applied holistically and proportionately to company scale & sector.

Assessment Framework

Projects assessed by Technology Readiness Level (TRL), GMP lifecycle phase, and facility design readiness from concept through validated operation.

Sectors Covered

Biotech, pharma, green energy, AI, digital platforms, and healthcare.
20 innovation hubs across the Biotechnopolis.

Review Process

Assessment conducted by IMPI with comprehensive legal, regulatory, ESG, and commercial review via Latham & Watkins.
Next-generation biotech & innovation across the biotechnopolis.

Biotechnopolis Built for Long-Term Luxury Livability

A private luxury city under GIFA — sovereign, climate-optimized, biosphere-first

312

DAYS OF SUNSHINE

per year — ideal for solar-powered and EHTP manufacturing

1,750m

ELEVATION

5,732 ft — comparable to Lake Tahoe with rich ecological diversity

Private City

UNDER GIFA

IMPI acts as municipality — self-governing with its own regulatory framework

SUMMER TEMPERATURES

61–84° F (16–29° C)

Warm but never extreme — no cooling-intensive infrastructure needed

WINTER TEMPERATURES

45–68° F (7–25° C)

Mild year-round — no heating burden, comfortable for residents & workers

End-to-End Biotech Ecosystem

High-sunshine highland climate supports R&D through manufacturing on 100% renewable energy

Biosphere-First Planning

Designed for long-term livability — preserving biodiversity as a core planning constraint

Biotechnopolis Key Takeaways for Pharma

Biotechnopolis is a Gateway to AfCFTA

Biopharma companies manufacturing in city are considered local to Africa and Caribbean

Extraordinarily Integrated

Integrated city proposal combining biotech R&D, manufacturing, AI, healthcare, & infrastructure at a scale rarely attempted, with \$79.1B+ capital required

Core value proposition to Biopharma

Vertical integration and cost arbitrage — by co-locating the entire pharma/biotech value chain in a low-cost, tax-free zone, the city dramatically undercuts costs in drug development & biopharma manufacturing

Capital de-risked by GIFA & VFIFC

Investor Rights Guaranteed by 2 Instruments-

Land rights, investment rights, project management rights, project financing rights, tax incentives, and freedom to use currency of choice guaranteed

Climate, sustainability & livability

Woven throughout — zero-emission power, carbon-neutral manufacturing, and a green circular economy

Vetting Process by Latham & Watkins

Projects assessed by Technology Readiness Level (TRL), GMP lifecycle phase, and facility design readiness (concept → validated operation)
